ServiceNow Administrator Portfolio

Mohsin R

Hands-on ServiceNow administration project completed in a Personal Developer Instance. The project covers incident configuration, form behavior, assignment automation, knowledge content, equipment inventory, data import and operational reporting.

Environment: ServiceNow Personal Developer Instance
Project scope: Custom IT Incident and Equipment Inventory tables
Purpose: Practical ServiceNow system administration portfolio

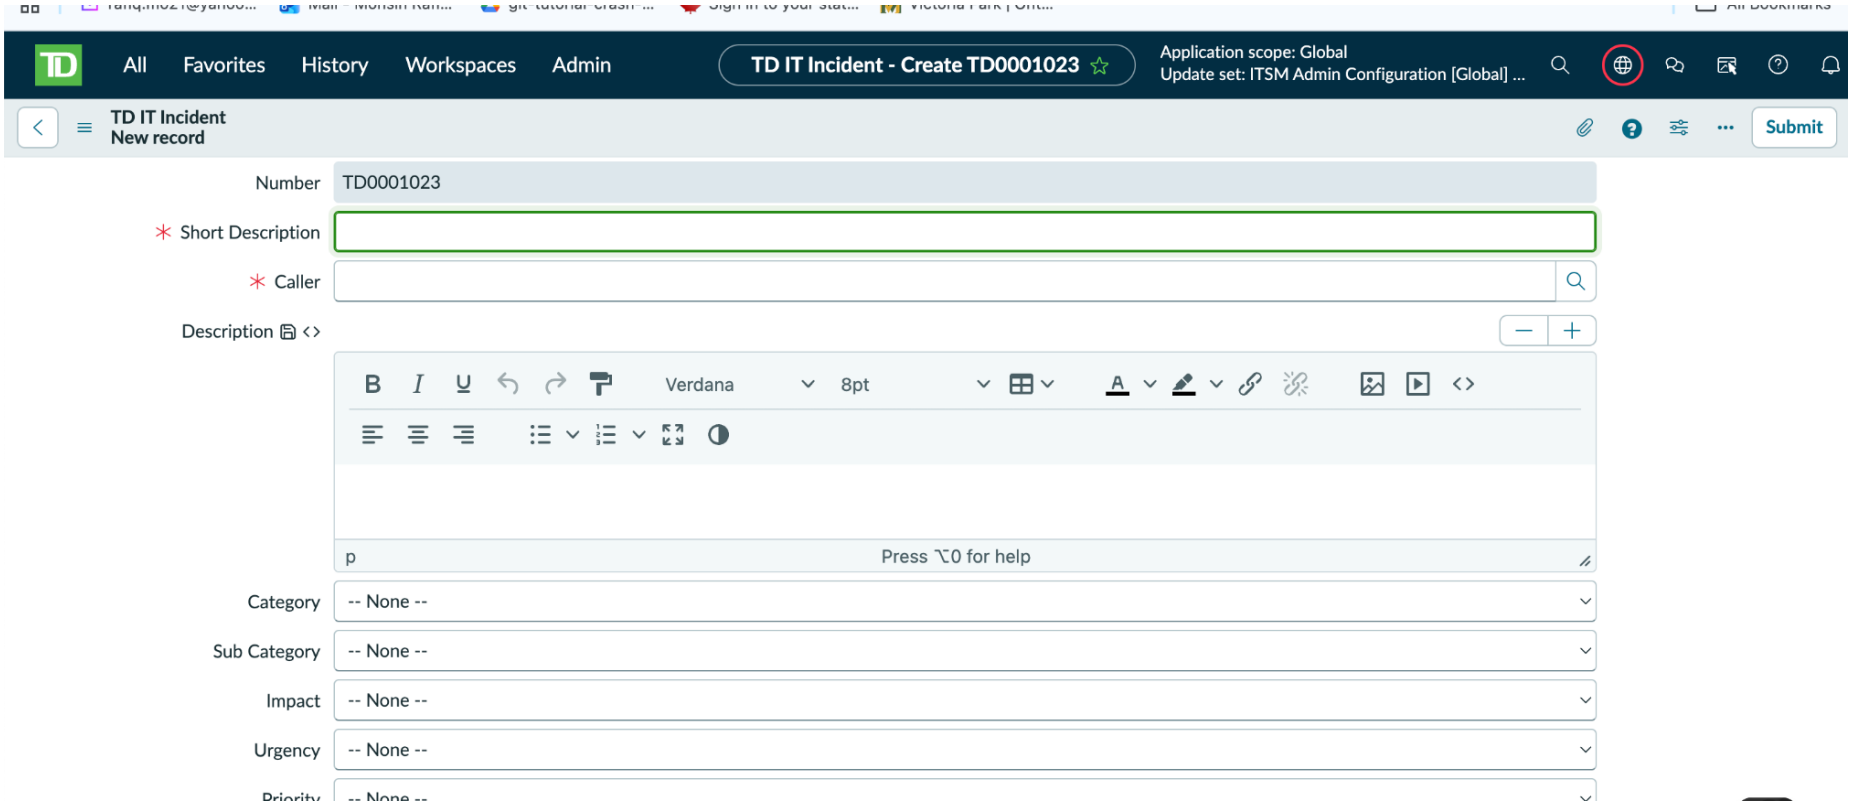

Project summary

I built a small internal IT support environment and configured the main administrative pieces around it. The work included custom tables and fields, form behavior, category-based assignment logic, support articles, equipment data imports and dashboard reporting.

Area	Configuration
Incident management	Custom incident table with classification, priority, assignment, state and resolution information.
Form configuration	Conditional resolution requirements and form/list administration.
Flow Designer	Category-based routing for Hardware, Software and Network incidents.
Knowledge	End-user support articles for common IT issues.
Equipment inventory	Custom inventory with device, assignment, location, warranty and cost information.
Data import	CSV load through an Import Set and Transform Map.
Reporting	Dashboard visualizations for incident and equipment data.

Incident form configuration

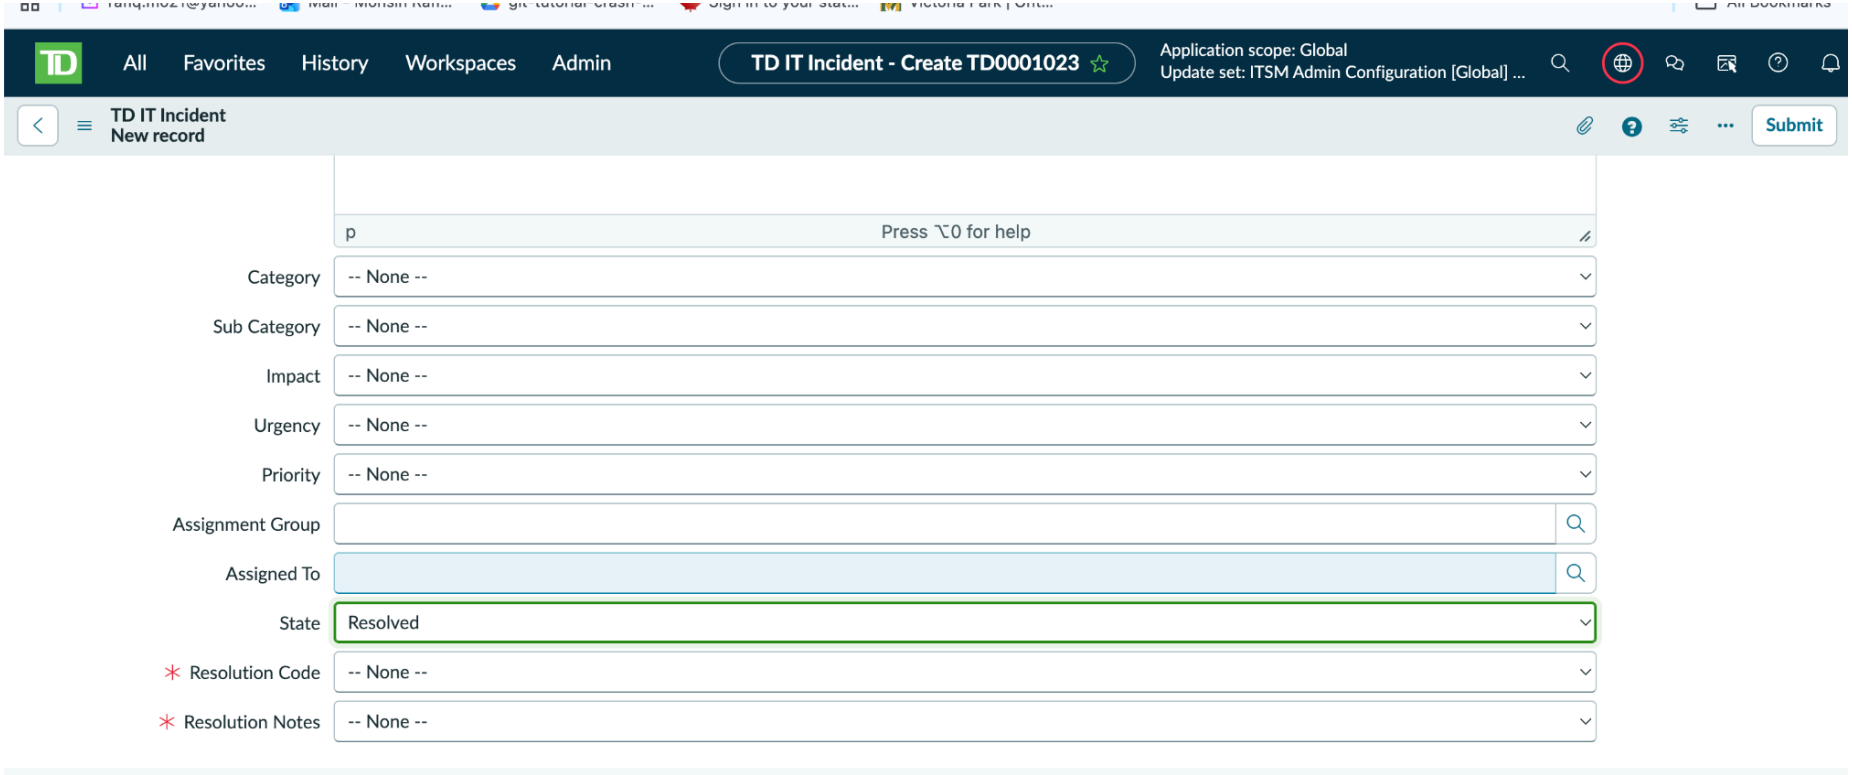

The TD IT Incident form captures the information needed to classify, prioritize and assign a support request.

TD IT Incident form.

Resolved incident controls

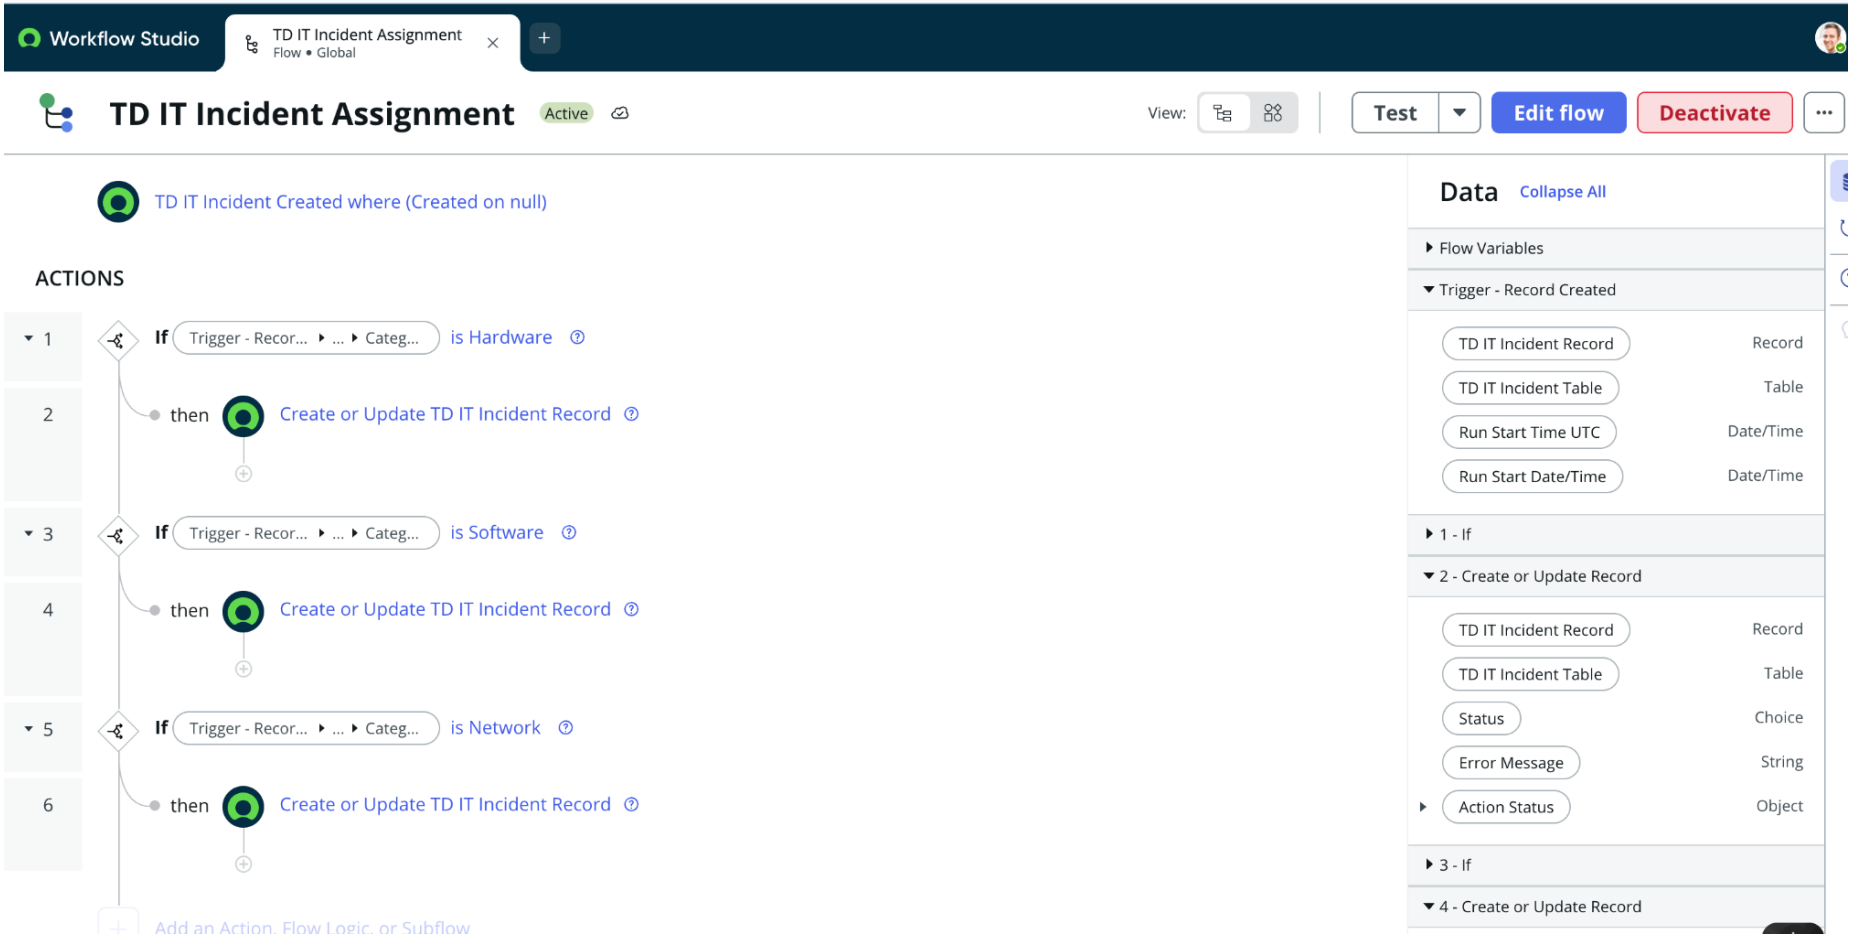

Resolution Code and Resolution Notes are required when an incident is moved to Resolved.

Resolved incident with mandatory resolution fields.

Flow Designer assignment routing

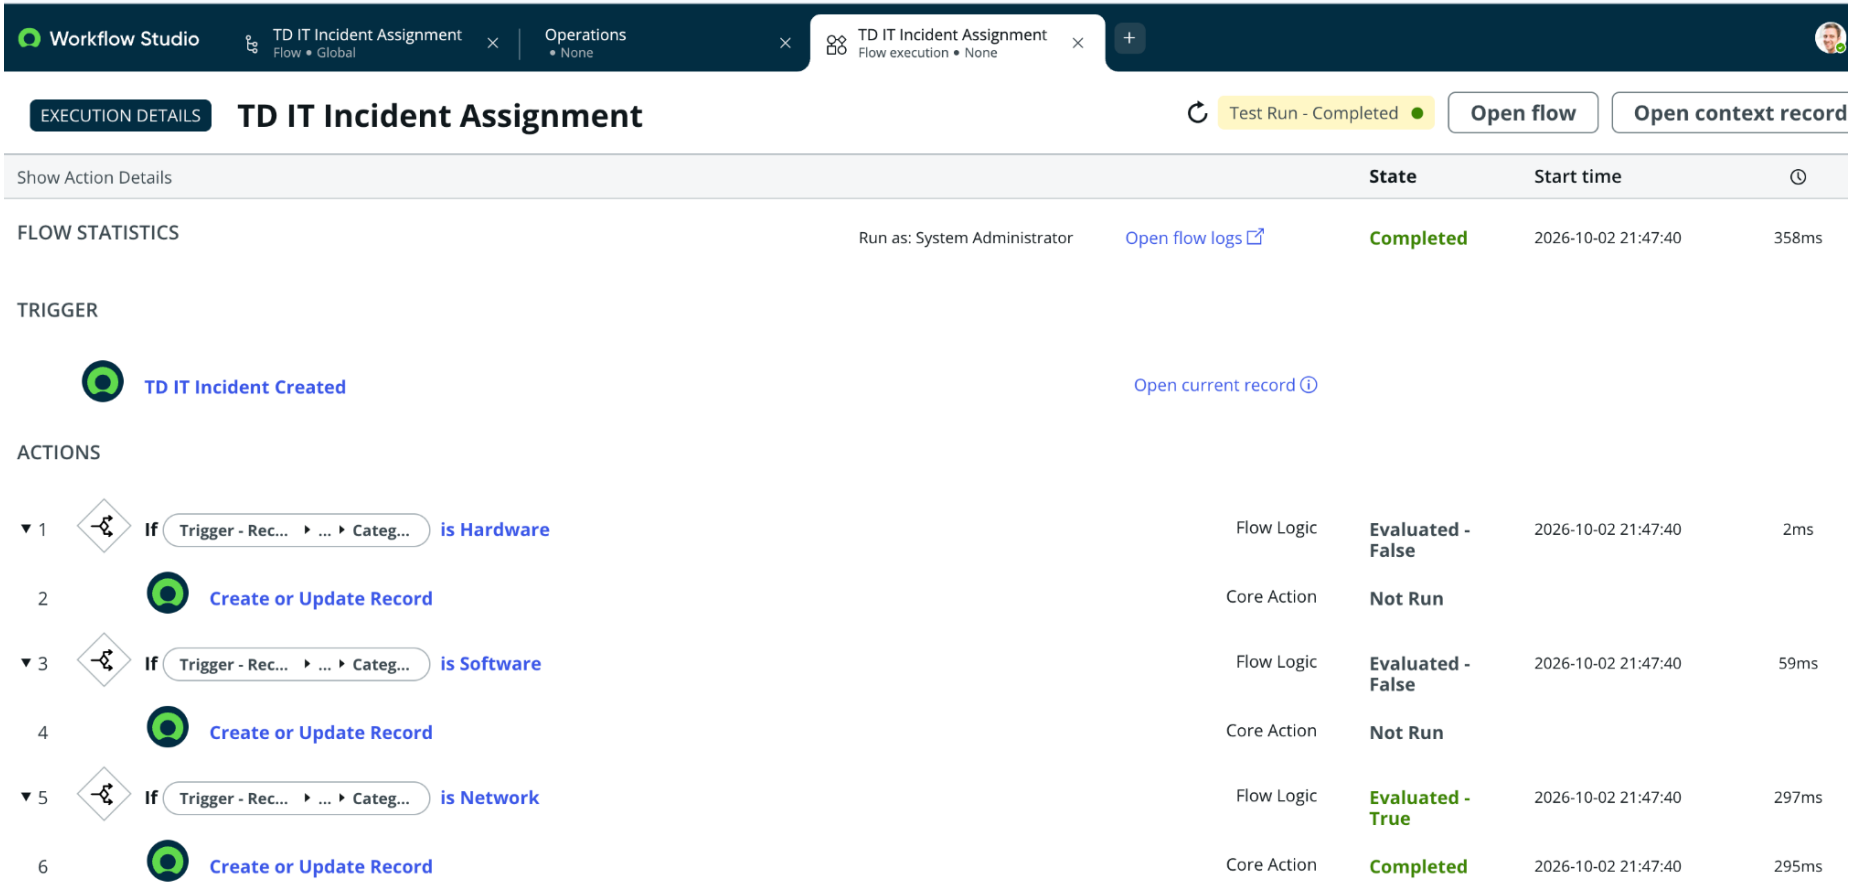

The incident assignment flow checks the request category and routes Hardware, Software and Network records through separate branches.

TD IT Incident Assignment flow.

Flow execution test

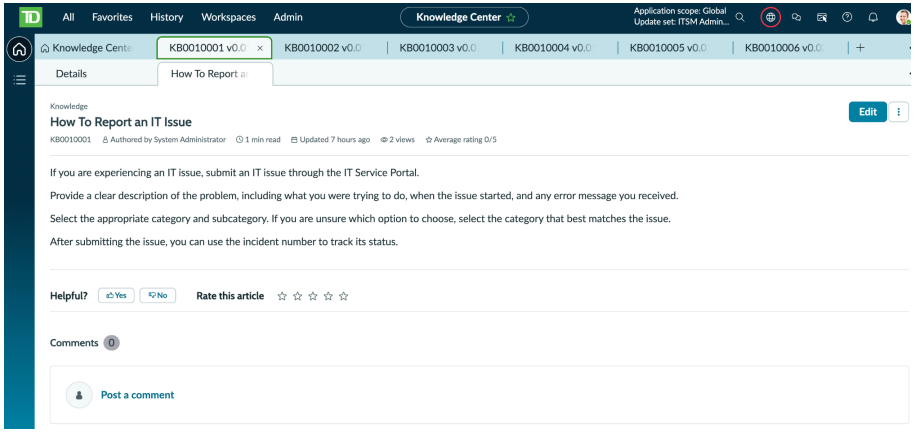

Execution details were reviewed to confirm the routing logic. In this test, the Network condition evaluated True and the update action completed.

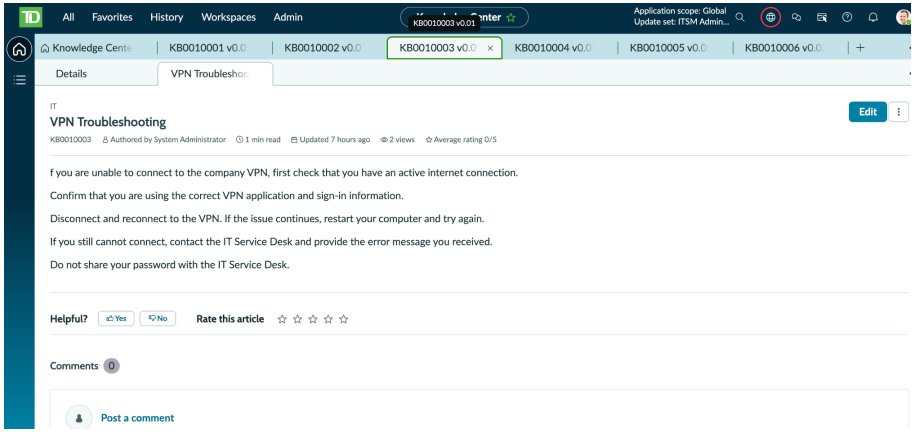

Flow execution result for a Network incident.

Knowledge Management

I created practical end-user articles for common support scenarios. The examples below show the issue-reporting guide and VPN troubleshooting article.

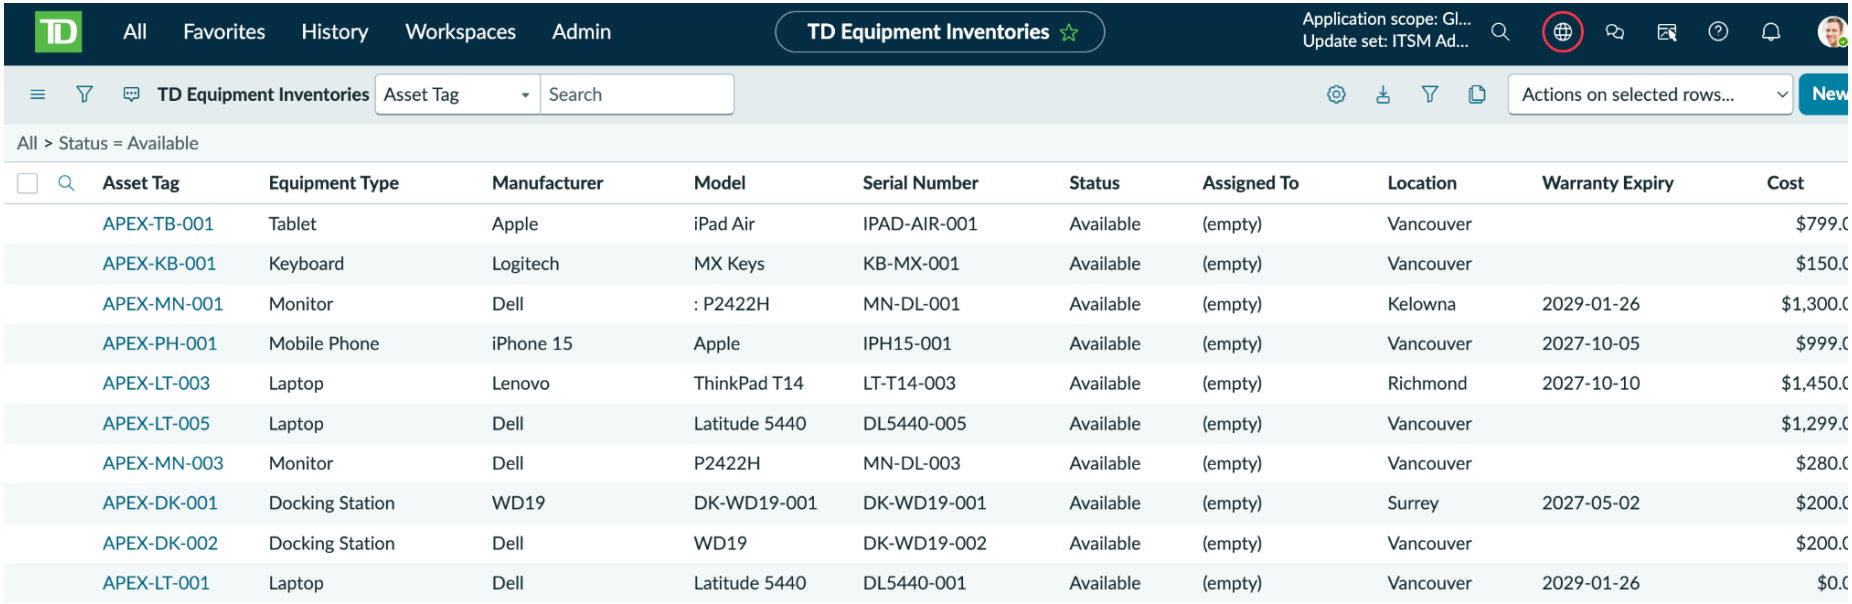

How To Report an IT Issue

Equipment inventory

The TD Equipment Inventory table tracks device details including equipment type, manufacturer, model, serial number, status, assignment, location, warranty and cost.

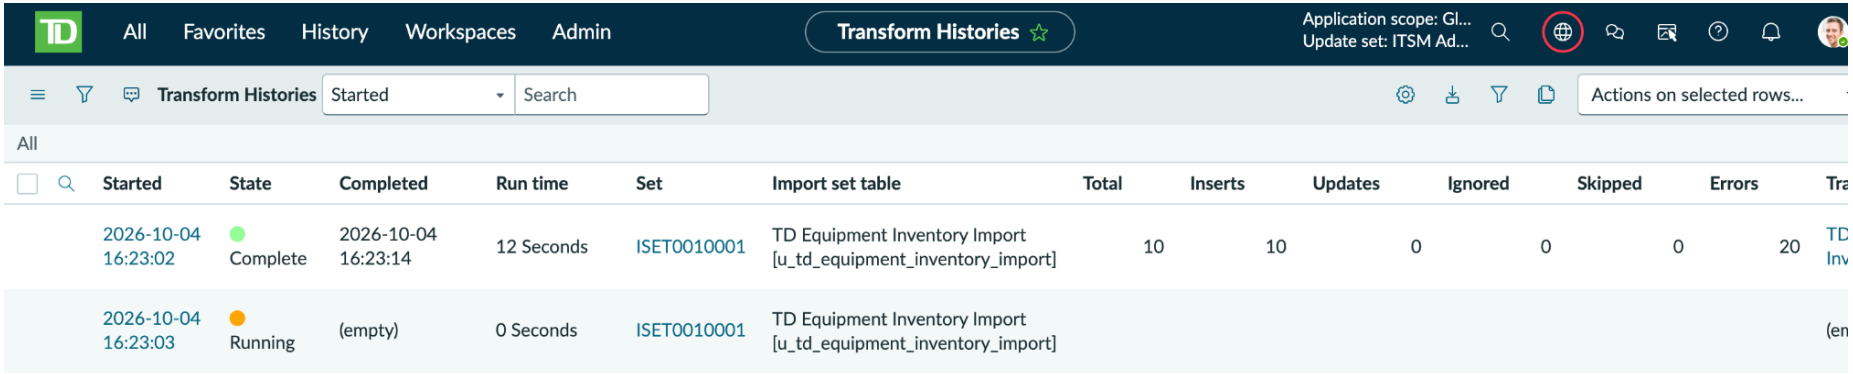

Asset Tag	Equipment Type	Manufacturer	Model	Serial Number	Status	Assigned To	Location	Warranty Expiry	Cost
APEX-TB-001	Tablet	Apple	iPad Air	IPAD-AIR-001	Available	(empty)	Vancouver		$799.0
APEX-KB-001	Keyboard	Logitech	MX Keys	KB-MX-001	Available	(empty)	Vancouver		$150.0
APEX-MN-001	Monitor	Dell	: P2422H	MN-DL-001	Available	(empty)	Kelowna	2029-01-26	$1,300.0
APEX-PH-001	Mobile Phone	iPhone 15	Apple	IPH15-001	Available	(empty)	Vancouver	2027-10-05	$999.0
APEX-LT-003	Laptop	Lenovo	ThinkPad T14	LT-T14-003	Available	(empty)	Richmond	2027-10-10	$1,450.0
APEX-LT-005	Laptop	Dell	Latitude 5440	DL5440-005	Available	(empty)	Vancouver		$1,299.0
APEX-MN-003	Monitor	Dell	P2422H	MN-DL-003	Available	(empty)	Vancouver		$280.0
APEX-DK-001	Docking Station	WD19	DK-WD19-001	DK-WD19-001	Available	(empty)	Surrey	2027-05-02	$200.0
APEX-DK-002	Docking Station	Dell	WD19	DK-WD19-002	Available	(empty)	Vancouver		$200.0
APEX-LT-001	Laptop	Dell	Latitude 5440	DL5440-001	Available	(empty)	Vancouver	2029-01-26	$0.0

TD Equipment Inventory records.

Import Set and Transform Map

Equipment data was loaded from a CSV file through an Import Set and transformed into the target inventory table. The completed run inserted 10 records.

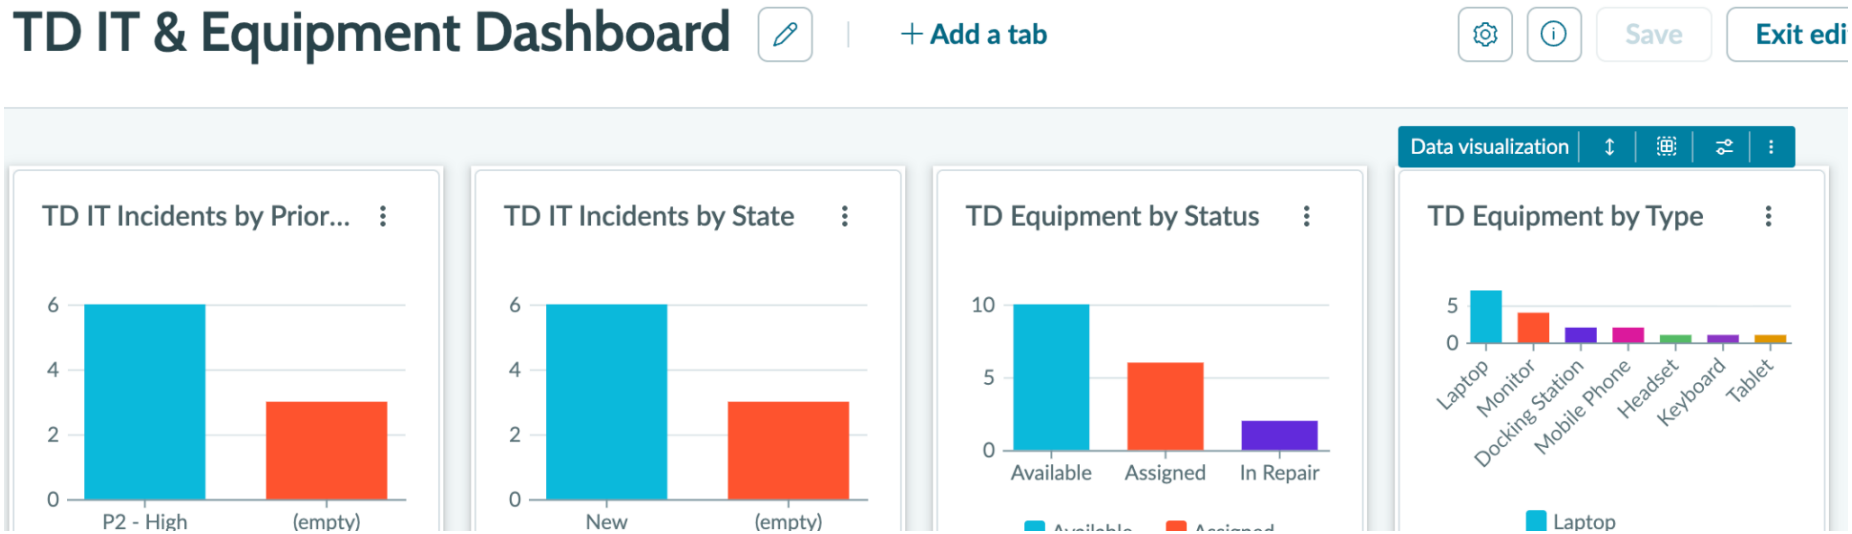

Started	State	Completed	Run time	Set	Import set table	Total	Inserts	Updates	Ignored	Skipped	Errors	Tra

Completed equipment inventory transform.

Dashboard and reporting

The dashboard brings the project data together in one view, with incident visualizations by priority and state and equipment visualizations by status and type.

TD IT & Equipment Dashboard.
